

iCommNet® KCPS and KCFGs

Patent-pending Knowledge Communicator™ Search is an intelligent, linguistics-based, precision search technology that delivers the most relevant search results to corporate customers in real time.

KC Precision Search (KCPS)

KC Precision Search™, an inter document precision search, returns the most relevant results from a multitude of in-house documents. With KC Precision Search, you can simply describe what you are searching for in conversational English to obtain narrow and specific results.

For example, if you are looking for a job that matches your career goals, you can simply describe your career goals in free-style English or paste your resume into the search request. KC Precision Search will then return the most relevant jobs that match your career goals or resume. Conversely, if you are an employer who needs to fill a position with the most-qualified candidate, you can simply paste your job description into the search request, and KC Precision Search will return the most relevant resumes that best match your job.

KC Fine-Grain Search (KCFGs)

KC Fine-Grain Search™ is a knowledge-based search algorithm that is fully integrated with KC Precision Search. While KC Precision Search returns the most relevant results from a multitude of documents, KC Fine-Grain Search conducts a fine-grain search to return the most relevant passages within each document selected.

KC Fine-Grain Search saves you time and energy by conducting an intra-document search to locate specific, key information. For example, you can use conversational English to describe the pertinent information you are looking for, or simply paste text from a document into the search request. KC Fine-Grain Search then performs a fine-grain, intra-document search and highlights the most relevant paragraphs, sentences, phrases, or words within that document.
