

iCommNet® KC Remote Search™

KC Remote Search combines all advanced features from KC Natural Language Processor, KC Precision Search, and KC Fine-Grain Search, to locate the most precise and relevant documents and sentences that best match the meaning of your exemplars.

How KC NLP Works

Type or copy any of the following in conversational English into the search request box:

- Words
- Phrases
- Sentences
- Paragraphs
- Entire documents (e.g., Resumes, Job Descriptions, and RSS articles)

Then, click search to obtain the most relevant and precise results.

It's that simple!

KC Remote Search

With KC Remote Search, you can deep search a huge volume of documents for sentences matching the meaning of exemplars-linguistic specifications (i.e., paragraphs, sentences, or phrases) that contain the meanings for which you are searching. You can create exemplars to perform deep searching over a vast amount of documents and on-line materials in the background. You can then conduct precise and fine-grain search and incrementally analysis on the Remote Search results in real-time.

Examples of some users who would benefit from KC Remote Search are federal intelligence agents perusing copious online content for potential security threats; and lawyers inspecting hundreds of thousands of contracts and emails to trace particular financial transactions. Physicians and medical personnel could also efficiently search vast volumes of medical records for diagnoses and treatments for particular symptoms. These are only a few examples of how KC Remote Search can efficiently hone in on specific and precise searches.

KC Remote Search offers a unique combination of advanced capabilities to achieve the meaning-based searches. While reviewing business documents, you can collect or create exemplars. When sufficient amounts of exemplars are prepared, you can then initiate the KC Remote Search in the background.
