

iCommNet® KC RSS

Precisely search RSS articles. Configure how RSS channels are scanned and article HTML files are captured. Expanding capabilities of conventional RSS Readers, KC RSS enables browsing RSS articles on the Web browser, defining RSS channel configurations, scheduling polling frequencies, generating RSS XML files, and creating article HTML files for precision search.

How KC Search Works

Type or copy any of the following in conversational English into the search request box:

- Words
- Phrases
- Sentences
- Paragraphs
- Entire Documents (e.g., lab test reports, patient history records, surgery records, and RSS articles)

Then, click search to obtain the most relevant and precise results.

It's that simple!

Key Benefits of KC RSS

- Increased productivity by precisely searching RSS articles that are relevant to work at hand
- Reduced search time by returning relevant articles from RSS channels
- Simple configuration of RSS channels and scheduler
- Aggregation of multiple RSS configuration files into a single RSS configuration file
- Automatic extraction of RSS articles into storage
- Fully integrated with iCommNet precision search solutions and products
- Automatic synchronization of expired RSS article HTML files

What Makes Us Exceptional

Conventional search products rely on keywords yielding large volumes of indiscriminate results. This creates a multitude of unfiltered search results generating hours of unnecessary payroll.

Our knowledge- and linguistics-based KC Search renders typical search products obsolete. Using proprietary Natural Language Processing and Knowledge Modeling technologies, KC Search selects your most relevant documents according to your specifications. KC Search classifies these documents based on knowledge-and context-based relevance, highlighting pertinent information within each document.

With KC Search, you can easily search electronic documents—such as Patient Health History, Lab Reports, and RSS articles—with efficiency and precision.
